PTOC. THIS PROTEIN MIGHT BE INVOLVED IN DETERMINATION AND/OR DIFFERENTIATION OF NERVE CELLS IN THE CONTINUOUS REPLACEMENT OF NEURONS IN THE CEPHALIC REGION.
PRESCRIPTION: NUCLEAR (Probable).
PRESCLULAR LOCATION: NUCLEAR AND UNIDENTIFIED PERIPHERAL PARENCHMAL CELLS. SLIGHTLY HIGHER LEVELS IN THE CEPHALIC REGION COMPARED TO OTHER BODY REGIONS.
PRESCRIPTION: SIMILARITY: BELONGS TO THE NK-2 HOMEOBOX FAMILY.

I Bardin S.D., Voegele R.T., Finan T.M.;

I "Phosphate assimilation in Rhizobium (Sinorhizobium) meliloti:

I identification of a pit-1ike gene.";

J. Bacteriol. 180:4219-4226(1998).

-i- FUNCTION: THE RECF PROTEIN IS INVOLVED IN DNA METABOLISM; IT I

C PROUIRED FOR DNA REPLICATION AND NORMAL SOS INDUCIBILITY. RECE

BINDS PREFERENTIALLY TO SINGLE-STRANDED, LINEAR DNA. IT ALSO SO TO BIND ATP (BY SIMILARITY).

C -i- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

C -i- SUBCELLULAR LOCATION: CYTOPLASMIC (Potential).

-I- FUNCTION: GUANINE NUCLEOTIDE-BINDING PROTEINS (G PROTEINS) ARE INVOLVED AS MODULATORS OR TRANSDUCERS IN VARIOUS TRANSMEMBRANE SIGNALING SYSTEMS.
-!- SUBUNIT: G PROTEINS ARE COMPOSED OF 3 UNITS; ALPHA, BETA AND GAMMA. THE ALPHA CHAIN CONTAINS THE GUANINE NUCLEOTIDE BINDING GAMMA. THE ALPHA CHAIN CONTAINS THE GUANINE NUCLEOTIDE BINDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.

PARENCIS SY GENERATION OF PYRUVATE FORWATE-LYASE 2 UNDER ANAEROBIC CONDITIONS BY GENERATION OF AN ORGANIC FREE RADICAL, USING S-ADENOSYLMETHIONIXE AND REDUCED FLAVODXIN AS COSUBSTRATES TO PRODUCE 5'-DEOXY-ADENOSINE (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + dihydroflavodoxin [formate acetyltransferase]-glycine - 5'-deoxyadenosine + methionine + flavodoxin + [formate acetyltransferase]-glycine-2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-97061202; PubMed-8905232;

FUNCTION: TRANSCRIPTION FACTOR THAT BINDS PREFERENTIALLY TO A VARIANT OF THE OCTAMER MOTIF ('ATGATAAT').

SUBCELLULAR LOCATION: Nuclear.

TISSUE SPECIFICITY: IN THE EMBRYO, WIDELY EXPRESSED, WITH HIGHES LEVELS IN THE DEVELOFING BRAIN AND SPINAL CORD. IN THE ADULT, MOSTLY FOUND IN THE BRAIN, WHERE IT IS DIFFUSELY EXPRESSED WITH THE EXCEPTION OF AN EMRICHMENT IN LAYER IV OT THE NEOCORREX. ALS FOUND IN KIDNEY, LUNG, HEART, ADRENAL, SKIN, AND PLACENTA. LOW LEVELS IN SPLEEN, MUSCLE, LIVER, ANTERIOR PITUITARY, TESTIS AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: CONTAINS 1 HOMEOBOX DOMAIN.

J. Syst. Bacteriol. 46:1170-1173(1996).

FUNCTION: THIS ENZYME COMPLEX CATALYZES AN INTERMEDIATE STEP IN METHANOGENESIS, THE FORMATION OF METHYL-COENZYME M AND TETRAHYDROMETHANOPTERIN FROM COENZYME M AND N5-METHYL-TETRAHYDROMETHANOPTERIN. THIS IS A ENERGY-CONSERVING, SODIUM-IC TRANSLOCATING STEP (BY SIMILARITY).

CATALYTIC ACTIVITY: 5-methyl-5,6,7,8-tetrahydromethanopterin + mercaptoethanesulfonate = 5,6,7,8-tetrahydromethanopterin + 2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PATHWAY:

Mey E., Lyons G.E., Schaefer B.W.;

"A human POU domain gene, mPOU, is expressed in developing brain specific adult tissues.";

EUR. J. Biochem. 220:753-762(1994).

11. FUNCTION: TRANSCRIPTION. FACTOR THAT BINDS PREFERENTIALLY TO A VARIANT OF THE OCTAMER MOTIF ('ATGATAAT') (BY SIMILARITY).

12. SUBCELLULAR LOCATION: NUCLEAR.

13. SUBCELLULAR LOCATION: NUCLEAR.

14. TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED EXCLUSIVELY IN THE SUBCELLOPING BRAIN, WHEREAS IN THE ADULT ITS EXPRESSION IS RESTRICTED TO BRAIN, HEART, SKELETAL MUSCLE AND LUNG. IN THE BRAIN, THE HIGHEST EXPRESSION LEVELS ARE FOUND IN SPECIFIC CE
                                                                                                                                                                                                                                                                                                                                                        Homeobox;
